

THE PROJECT:

Fabrication of Tool Deployment Basket

OVERVIEW

Client: Marine Solutions Provider

Scope: Manufacturing of Tool Deployment Basket

**THE PROJECT**

With a diverse product range and highly experienced team of engineers, Spiral Services has supported a leading marine solutions provider in the successful delivery of a subsea deployment basket, designed in accordance with DnV 2.7-1: Offshore Containers.

Working to client's specific design and technical drawings, Spiral Services provided a fully rounded service including the supply of expert personnel and materials, as well as complete fabrication of the basket. With a quick turnaround, Spiral Services delivered the project on-time, under budget and with safety as the highest of priorities.

The Application

The deployment basket is to be used as part of a Life of Field (LoF) extension project for the client and will assist in maintaining production on an ageing asset. The deployment basket runs wire and will be used to transfer LoF equipment from a DSV (Dive Support Vessel) subsea to water depths of approximately 120m.

CONCLUSION

This project is a true reflection of the fully rounded service that Spiral Services has the ability to offer. During the whole project, there remained a strong focus on safety, sound engineering and fabrication excellence which ensured the timely and on budget completion of the unit. Strong cooperation between all parties resulted in a project executed safely and to the complete satisfaction of the client.

CLIENT TESTIMONIAL

'Spiral Services was successful in the supply of a Subsea Deployment Basket, delivered within a very tight deadline to meet offshore operational requirements. All stages of the process, from quotation and procurement through to fabrication and final supply, were completed efficiently. Good project management communication throughout the complete scope.'
