

THE PROJECT:

Offshore Conveyor Installation Support Services

OVERVIEW

Client: Augean North Sea Services

Scope: Offshore Conveyor Installation Support Services

**THE PROJECT**

With a diverse product range and highly experienced team of engineers, Spiral Services was contracted to support Augean North Sea Services in the successful delivery of an offshore installation onboard a North Sea drilling platform.

In conjunction with the client, Spiral Services offered a complete design, supply, fabrication, and installation service for this crucial installation, including screw conveyors in front of the rig shakers with additional conveyors tying in the drilling fluid centrifuge discharges. This system was fabricated onshore, shipped on-site to the asset, installed and then tested, allowing for the equipment to be prepared for the drilling campaign.

Delivered on time and with safety the highest of priorities, the project was delivered under budget. Spiral Services takes pride in ensuring successful installations for our clients, providing equipment with long lasting quality and after-sales support as part of the service.

CONCLUSION

A strong focus on safety, sound engineering and operational excellence ensured the timely and under budget completion of the campaign. Strong cooperation between all parties resulted in a project executed safely and to the complete satisfaction of the client.

CLIENT TESTIMONIAL

"First class service from point of order to delivery on deadline; a true feeling of going above and beyond."

"The highly skilled personnel provided an excellent service, proactively supporting the Augean team and other service providers onboard with welding jobs."

"Special mention for Brian Wilson, he has been a great help with the install and the team can't speak highly enough of his workmanship."
